riyasatahmed06@gmail.com | [Riyasat Ahmed LinkedIn](#) | +1 647-852-4188

Skills

Technical: N8N Automation Workflows, Git, Docker, Basic Excel, SSH Linux Servers

Languages & Frameworks: C, Python, HTML, CSS, JavaScript, SQL, ReactJS, NodeJS, Supabase

Education

Bachelor of Computing Honours

September 2024 – Present

Specialization in AI | Minor in Project Management

University of Guelph, Guelph ON, Canada

Relevant courses: Intermediate Programming in C, System Design & Development, Data Structures, Operating Systems

Work Experience

Software & Data Engineer Intern – ValueInfinity Inc., Mississauga ON, Canada

May 2026 – Present

- Engineered natural language semantic search by integrating Qdrant vector DB with all-MiniLM-L6-v2 embeddings
- Reduced knowledge review overhead by integrating Gemini AI to auto-summarize lessons into actionable briefs
- Delivered zero-manual-intervention deployments by building GitHub Actions CI/CD pipeline targeting Azure App Service
- Instrumented production Node.js backend with Azure Application Insights, enabling live request tracing and exception monitoring

AI & Data Intern – Scalefiniti, Mississauga ON, Canada

April 2025 – September 2025

- Built an n8n LinkedIn pipeline sourcing trending content and generating daily post drafts, saving 2+ hours daily
- Integrated Microsoft Teams for one-click draft approval and automatic publishing with no manual steps
- Built an n8n AI agent booking, cancelling, and rescheduling calendar events with 100% accuracy, saving ~1hr daily
- Extended the agent to send professionally formatted emails via voice command, eliminating manual composition

Personal Projects

Motives - Mobile iOS App

June 2026

- Engineered a **3-CTE PostGIS SQL ranking function**, reducing all discovery queries to one database round trip
- Isolated Google Places API key to a server-side pipeline**, making client-side key exposure structurally impossible
- Built a **6-stage CLI seeding pipeline** across 43 Canadian cities, **eliminating all runtime third-party API calls**
- Parameterized query cache keys to 100m precision**, reusing results within a city block across tab navigation
- Unified wishlist and visit history into one table**, eliminating cross-table race conditions on state transitions [Link](#)

Treasure Runner - Terminal Game

April 2026

- Managed manual memory allocation in C across nested structs**, ensuring no leaks through clear ownership rules
- Implemented a generic directed graph data structure in C**, validated via a multi-suite Check framework test harness
- Built a **Python-to-C FFI layer using ctypes with ABI-stable opaque pointers** across both runtimes
- Architected a **layered MVC game engine across C and Python with a terminal UI rendering layer**
- Built a **deterministic Python integration test runner integrated into a GitLab CI/CD pipeline** [Link](#)

Personal Portfolio

- Using the **ReactJS framework, JavaScript, HTML, CSS**, I created a unique, **interactive** personal portfolio [Link](#)

Extracurriculars

University of Guelph Racing Club

September 2024 – Present

- Collaborated with Engineers to design a 2D front wing element, helped test the 3D version from the 2D front wing
- Created design prototypes on paper for the front wing, documenting all changes
- Designed test cases to run on the 2D & 3D prototypes, documenting all changes in variables, constants, and results

Google Developer Student Club

September 2024 – Present

- Created demo apps, websites with Google-based programming languages such as Flutter
- Built a task manager emphasizing on utilizing objects to enhance functionality
- Created a weather app focusing on different methods to present media to make the app more engaging
- Designed a messaging platform with the goal of making UI accessible to neurodiverse users
